

I am excited to be standing for election to the OCNI Board of Directors. Through my current role as Manager, Nuclear Strategy and Business Development with Aecon Nuclear, I am committed to the advancement of the nuclear industry in Canada, the United States and abroad. Aecon Nuclear is one of the largest nuclear contractors in Canada, allowing me to bring the perspective from both a nuclear supplier, and a large procurer of nuclear services and equipment in the market.

I share OCNI's objective to promote a robust nuclear power industry and would welcome the opportunity to support the growth of OCNI member organizations. It is an exciting time to be in the nuclear industry, and I believe there are opportunities for OCNI to help members create value across all phases of the nuclear lifecycle; from continuing to support asset management of the existing fleet and developing modern waste management and decommissioning strategies, to taking a lead role in nuclear innovation such as the production of isotopes, supporting a hydrogen economy with clean nuclear power, and deployment of Small Modular Reactors.

Having worked at Ontario Power Generation for nearly 20 years, I would also bring both a utility and private sector perspective to the Board. In addition to various roles supporting nuclear, I have a strong background developing a variety of clean energy technologies, including hydroelectric, solar and energy storage and have prior experience working on committees and task teams with renewable energy associations (e.g., Ontario Waterpower Association, Energy Storage Canada) providing me with a solid understanding of the overall energy landscape.

As an OCNI Board member, I would provide strong support to the advancement of OCNI's Diversity and Inclusion initiatives to increase diversity in the nuclear supply chain and workforce. I have first-hand experience developing large scale energy projects in partnership with Indigenous communities and would leverage my experience developing Indigenous engagement plans and strategies for Indigenous business, employment, and training opportunities.

There are great opportunities ahead for the nuclear industry in Canada and abroad. I look forward to the opportunity to represent OCNI members, forging strong connections among members and customers and continuing growth in OCNI while further building a thriving nuclear supply chain through innovation and leadership.
