

My name is Natalie Cutler and I'm the Director of Communications and Government Relations for BWXT's Nuclear Power Group in Canada.

BWXT's Nuclear Power Group serves the global commercial nuclear power industry with engineering, critical components, services and fuel, and it also serves the nuclear medicine industry with medical isotopes and radiopharmaceuticals.

I am pleased to be running for a board seat with the OCNI and I'd like to share with you some of my qualifications that I feel lend to my suitability as an OCNI board member.

In my nearly 13 years of being part one of the largest supply chain companies in the nuclear industry, I have gained a thorough understanding of both the challenges we face as an industry as well as the exciting opportunities ahead of us.

I am particularly interested in ensuring that elected officials and the public have a thorough understanding of the important role nuclear technology plays in the lives and health of Canadians.

I'm currently the Chair of BWXT's Indigenous Relations Committee as well as Co-Chair of BWXT's Toronto and Peterborough Community Liaison Committees. In these roles, I have gained valuable insights that have enabled BWXT to make improvements in its BWXT's public information programs and our efforts to meaningfully engage with Indigenous communities. I also sit on BWXT Canada's Diversity and Inclusion Committee with a goal of ensuring that all employees feel valued and proud of who they truly are. Externally, I sit on the CNA International Advisory Working Group, a committee focused on better understanding and participating in international nuclear industry events and opportunities.

As a long-term member of the ONCI, I have first-hand knowledge of the successful initiatives, events and efforts organized and executed by the OCNI. I believe that my skills and experience in Communications and Government Relations will help me contribute to OCNI's continued success in raising awareness about the importance of nuclear technology as it relates to our quality of life and the health of our planet.

I hope I can count on your vote and I look forward to being part of the nuclear industry for many years to come.
