

ANTHONY JACKMAN

Promote the supply chain community and capabilities in New Brunswick, while seeking opportunities for companies to expand their capabilities into the nuclear power industry.

Provide strategic direction to the OCNI board based on

current activities: • Direct collaboration with utilities and government agencies to develop nuclear manufacturing, project management, and construction capabilities in New

Brunswick. • Working with the Government of New Brunswick to develop and realize economic benefits for the province from the nuclear industry, including labour force development. • Currently employed with a nuclear technology company that is designing one of the first grid-scale Advanced SMRs that will be built and operated in Canada, that has the capability to provide high temperature steam for industrial applications, as well as produce medical isotopes, providing me with insight into value and supply chains from SMR development. • Share learnings from ARC's indigenous engagement successes related to building relationships with New Brunswick First Nations communities and tribal councils and exploring opportunities across Canada with other indigenous groups. • Promote OCNI with a view to expanding partnership and membership opportunities between current members and other organizations in the Atlantic provinces, with initial focus in New Brunswick, and across Canada. • Working with external organizations on SMR commercialization and supply chain development, including labour force readiness, and construction project components. • Better support OCNI's Ready for SMR program. • Share experience from exploring advanced manufacturing opportunities.
