

Fabricia Pineiro Tresierra

Fabricia Piñeiro is Vice-President, Canada Operating Plant Services, at Westinghouse. In this role, Fabricia leads Westinghouse's Canadian operations to provide innovative solutions to the Canadian and international CANDU nuclear markets. This follows 10 years of working in technical, government relations, business development and strategy roles. Fabricia started her career as a nuclear reactor physicist focused on the development and analysis of CANDU reactors including flexible fuel applications and new build projects. As an active climate change ambassador and nuclear supporter, she has held various leadership positions in non-for-profit organizations including the International Youth Nuclear Congress (IYNC), North American Young Generation in Nuclear (NAYGN), the Canadian Nuclear Society (CNS) and Women in Nuclear (WiN). She is currently a member of the Board of Directors for the Organization of Canadian Nuclear Industries (OCNI). Fabricia holds an Engineering Physics degree from McMaster University, a Master in Business Administration (EMBA) from Western University's Ivey Business School, is a licensed engineer in Ontario (P.Eng) and holds a Project Management Professional (PMP) certification.

I look forward to continuing to serve the OCNI board. As I have demonstrated in my current term, I am an active participant in board meetings and have significantly contributed to board subcommittees. My experience in engineering, government relations, strategy, business development and operations have equipped me with a broad range of skills that I am eager to bring to the table. I am proud to always support an environment of open and honest communication, while striving for excellence.
