

Peter J Dalton

Peter Dalton is a 40 plus year veteran specializing in Business Development, Sales & Marketing, and Procurement within the nuclear and automotive industries. Working for various multi-national organizations, Peter has held a number of line manager and senior executive positions in Sales & Marketing as well as Supply Chain for both private sector and Government Crown Corporations. International experience has served Peter well as he had been previously employed by Atomic Energy Canada Ltd (AECL), Toyota Motor Manufacturing Canada, and AGS Automotive Systems. Peter has trained in lean manufacturing practices, participated in many supplier evaluations, Customer Service benchmarking, industry related workshops, and has provided technical and licensing support. These experiences provide Peter with in-depth knowledge of industry best practices and standards in all aspects of customer relations and sales. Peter studied mathematics and natural sciences at McMaster University in Hamilton, Ontario, and resides in Southern Ontario. In his spare time, Peter loves to travel and still play a little hockey.

I am currently working in business development with NWI Precision Tube LLC. NWI has long term experience in the Candu nuclear field, previously known as Triumph Gear and General DonLee. They are known for their production of the end fittings amongst other machined/assembled components. I have been with OCNI member company NWI for over a year and previously had my own nuclear consulting company DaltX. Prior to that I was Director of Procurement at AECL, and Director of Customer Relations and Sales for CANDU Services. My experience in both the procurement side as well as sales/business development will be beneficial to the OCNI Board. Especially at this time of nuclear power generation growth.
