

David Tanel

David is the Regional Vice President of Global Markets for Westinghouse Canada, where he leads commercial strategy and customer engagement while supporting stakeholder engagement across the Canadian nuclear sector. With more than 23 years in Ontario's energy industry, including 15 years in natural gas and the last six in nuclear. David has built a career at the intersection of engineering, business development, and supply chain growth. Since joining Westinghouse in 2019, he has been an integral part of the leadership team that has expanded Westinghouse Canada through acquisitions and organic growth to an organization of over 300 employees. David complements a strong technical background with deep commercial expertise and a passion for strengthening Canada's nuclear supply chain to compete domestically and globally. He is a licensed Professional Engineer in Ontario with a Mechanical Engineering degree from the University of Toronto.

I am seeking election to the OCNI Board because I believe this moment represents an unprecedented opportunity for Canada's nuclear supply chain. With the successful life extension of our existing fleet, momentum around SMRs and micro-reactors, and pan-Canadian interest in new large-scale builds, our industry is poised to expand at a scale not seen before in Canada. To realize this opportunity, we must ensure accessible entry points that allow small and medium enterprises to participate and thrive alongside our world class Tier 1s. My 23 years in energy, from natural gas to nuclear, and experience across small, medium, and large organizations give me a unique perspective on how to strengthen our supply chain and deliver on the opportunity before us. As a fair and principled leader, I will work to help OCNI continue to elevate members, connect industry and government, and champion Canadian suppliers so that a rising tide truly lifts all boats.
