

**Owen Tennant**

Owen is a Senior Account Manager at PROMATION bringing his almost decade-long career in the nuclear industry spanning quality management, project leadership, and strategic growth to the OCNi as a Board candidate. Starting as a Quality Apprentice in the UK before moving to Canada in 2018, Owen combines international perspective with deep sector knowledge. Passionate about nuclear energy and life-saving medical isotopes, he co-founded and chaired the OCNi Advanced Technology and Process Council, creating a forum for innovation and collaboration across the supply chain. Known for integrity, trust, and transparency, he delivers value-added, solution-focused technical insights to build strong client relationships and deliver sustainable opportunities. Owen is widely respected for his collaborative approach and well-established network and is a leading advocate for the Canadian nuclear industry. His international experience, operational expertise, and industry leadership has allowed him to cultivate a well-established network.

Owen's vision for the OCNi is to maximize member value by actively engaging stakeholders and ensuring transparent, accountable governance by refocussing the strategy on doing more of what is working and changing what is not. The ability to get ideas out of the boardroom and into the industry is traditionally a downfall in the nuclear sector; a focus on speeding up this process whilst maintaining the integrity of decision making is critical to maintaining Canada's leading market position. With a reputation for independent thinking, strategic oversight and fostering open dialogue, Owen is well positioned to contribute as a Non-Executive Director who champions member interests and supports OCNi's long-term success.
