

Ross Baker

Ross Baker is an accomplished operations and project management leader with nearly two decades of experience in the nuclear and automation sectors. He currently serves as Director of Operations – Nuclear at ATS Corporation, leading large-scale automation projects that support both Canadian and international nuclear industries. In this role, he oversees operational strategy, project execution, and service delivery, while driving innovation and efficiency in highly regulated environments. Previously, Ross spent over six years at BWXT Canada, advancing from Project Manager to Manager of Field Services Engineering, where he managed complex projects and field engineering services. With expertise in nuclear operations, automation solutions, and project delivery, Ross is recognized for driving operational excellence and leading high-performing teams in critical infrastructure industries.

I am seeking the opportunity to serve on the OCNi Board of Directors to help strengthen Canada's nuclear supply chain and ensure the continued growth and success of our industry. I bring nearly 10 years of experience in Ontario's nuclear sector, including leadership roles in field service program management and engineering services, as well as the past several years focused on automation and technology-driven solutions that support the evolving needs of our industry. This combination of hands-on technical expertise and program leadership has provided me with a broad perspective on the challenges and opportunities facing our sector. If elected, I will work to advance innovation and competitiveness by supporting the adoption of new technologies that enhance safety, efficiency, and global opportunities. I am also committed to strengthening workforce development to ensure we build the talent pipeline required for future industry growth, while ensuring that OCNi continues to deliver value to members through advocacy, collaboration, and expanded opportunities both domestically and internationally. My professional experience has allowed me to work closely with utilities, partners, and suppliers across the supply chain, and I am dedicated to bringing this perspective to the Board to ensure OCNi continues to empower its members and help the Canadian nuclear industry thrive. It would be an honour to serve, and I respectfully ask for your support.
