

Jerome Horowitz

Jerome Horowitz is President Brotech Precision CNC, a Barrie-based machining company serving the nuclear industry. Since joining Brotech, Jerome has led the transformation from small job shop into a professionally managed company focused on quality, reliability, and continuous improvement. Jerome brings leadership experience in manufacturing, operational excellence, strategic management, and skills development while experiencing growth. He held earlier senior roles in a B2B manufacturing and distribution group undergoing rapid Canadian growth, and integration with regional and global operations. His board-level responsibilities included North American units, aligning corporate goals and systems, organic growth and acquisitions. As a candidate for the OCNI Board, Jerome offers an owner-operator perspective in the nuclear supply chain. He understands the value of dependable supply, strong quality systems, workforce capability, and team work. His background positions him to contribute meaningfully to OCNI's work in strengthening Ontario's nuclear supply chain, promoting manufacturing excellence, and developing workforce skills.

I am seeking election to the OCNI Board of Directors because Canada's nuclear future will be determined not only by ambitious plans, but by the ability of the Canadian supply chain to deliver safely, reliably and on schedule. The industry must protect and expand the manufacturing capability already supporting nuclear projects today: qualified people, proven quality systems, disciplined project execution, modern equipment and the ability to deliver repeat work without compromising safety or schedule. As President of Brotech Precision CNC, a Canadian precision-manufacturing supplier to our industry, I have a direct understanding of the responsibility carried by Canadian suppliers, from every perspective - quality and traceability, production planning, skilled labour, supply chain management, dependable delivery, and of course efficiency.

If elected, I would bring the perspective of a nuclear manufacturer to the OCNI Board. I would support OCNI's efforts to:

1. Strengthen the depth and resilience of Canada's nuclear supply chain, including small and mid-sized manufacturers that can grow with the industry.
2. Address the skilled-trades and technical-workforce challenge through promotion, recruitment, training, knowledge transfer and retention initiatives.
3. Ensure that growth in the supply chain is matched by quality, traceability, project-management and execution discipline required for nuclear work. I believe I can be a valuable support for our industry through this critical and exciting growth.
