

Michael H. Chatlani

Michael assumed responsibility for sales for L3Harris' Power Systems and Simulation business approximately 30 years ago. Under his leadership, he and his team significantly expanded the business's sales and global market presence, helping establish its Canadian operation as a world leader in the delivery of nuclear power plant simulators. He also led the development and growth of the globally recognized Orchid® software brand. Throughout his career, Michael has played an active role in defining the company's technology priorities and driving innovation. Prior to moving into marketing and business development, he held a variety of project management positions, leading the implementation of energy management and power plant simulator projects. Michael has been deeply engaged in Canada's nuclear industry. He served on the Canadian Nuclear Association Board from 2008 to 2023 and has served two terms on the OCNi Board since 2020. As an OCNi Board member, he has been a strong advocate for expanding opportunities for the Canadian nuclear supply chain and has remained actively engaged in numerous domestic and international industry events and targeted advocacy initiatives. During his tenure, he has served on several committees and currently sits on the Governance and Nominations Committee and the Human Resources Committee. Michael holds a Bachelor of Engineering (Mechanical) degree from Concordia University in Montreal, Canada.

What I Bring to the OCNi Board L3Harris is a founding member of OCNi, and I have had the privilege of serving two terms on the Board. Throughout this time—and for many years—I have remained actively engaged in OCNi events, Supplier Days, trade missions and other initiatives. I would welcome the opportunity to continue contributing to OCNi and to Canada's nuclear supply chain. I bring five key attributes to the Board:

1. **A strong commitment to Canada's nuclear future** I am unwavering in my commitment to advancing clean, reliable and secure nuclear energy in Canada—and to maximizing the participation and economic benefits of the Canadian nuclear supply chain. A strong nuclear industry requires a strong domestic supply chain, and OCNi has an important role to play in making that happen.
2. **A Quebec perspective** L3Harris' nuclear power business is based in Montreal, Quebec. I would continue to bring a valuable Quebec perspective to the Board, while helping strengthen connections between Quebec companies and the broader Canadian nuclear ecosystem.

3. Deep international nuclear experience Over my career, I have developed business across both CANDU and non-CANDU nuclear markets, from Canada and Brazil to Europe, South Africa and Asia. This has given me a broad understanding of international nuclear markets, customers and opportunities. I hope to continue bringing this experience to the Board and contributing to the positioning of Canadian companies as strong partners in global nuclear markets.

4. An independent and direct voice I am known for being direct, open and candid. I believe Boards benefit from constructive debate and diverse perspectives. If elected, I will speak freely and constructively in Board discussions, while ensuring that the interests and perspectives of OCNI members remain at the forefront.

5. A passion for marketing and communications I have a genuine enthusiasm for marketing, branding and communications. When called upon, I would be pleased to contribute my experience to strengthening OCNI's profile, messaging and communications—helping showcase the capabilities of Canada's nuclear supply chain at home and around the world.

I believe OCNI has an important role to play in Canada's nuclear growth story, and I would be proud to continue contributing my experience, perspective and energy to that mission.
